# WELCOME. TO THE WORLD OF FLUID.

## JOURNEY OF THE SENSES

In our world, rowing is more than just an exercise. It's a physical and sensory experience that connects you to the water.

When you row with a Fluid Rower, you're not just moving through the motions. You see, feel and hear each stroke, creating an unparalleled sense of natural motion and fluidity, making every workout a truly engaging and immersive journey.

## ENGINEERED TO PERFECTION

At the heart of Fluid lies the patented Twin Tank technology, seamlessly bringing the essence of water rowing into your home gym. With an instant catch and an uninterrupted, smooth rowing stroke, you'll feel like you're gliding effortlessly on the water itself.

Years of expertise have meticulously shaped each Fluid Rower to perfection, using only the finest materials like durable ash wood, combining strength with elegance. The one-piece, bent tank frame absorbs the force from every stroke, delivering a powerful yet stable rowing experience that's engineered to elevate your workouts.

## ELEVATE YOUR EXPERIENCE

Fluid Rowers are designed for everyone – from seasoned athletes to fitness beginners. Our innovative resistance system allows you to tailor your workout intensity effortlessly. Whether you're looking for a light warm-up or a challenging full-body session, Fluid adapts to your fitness level. Each rower is a versatile companion on your own fitness journey.

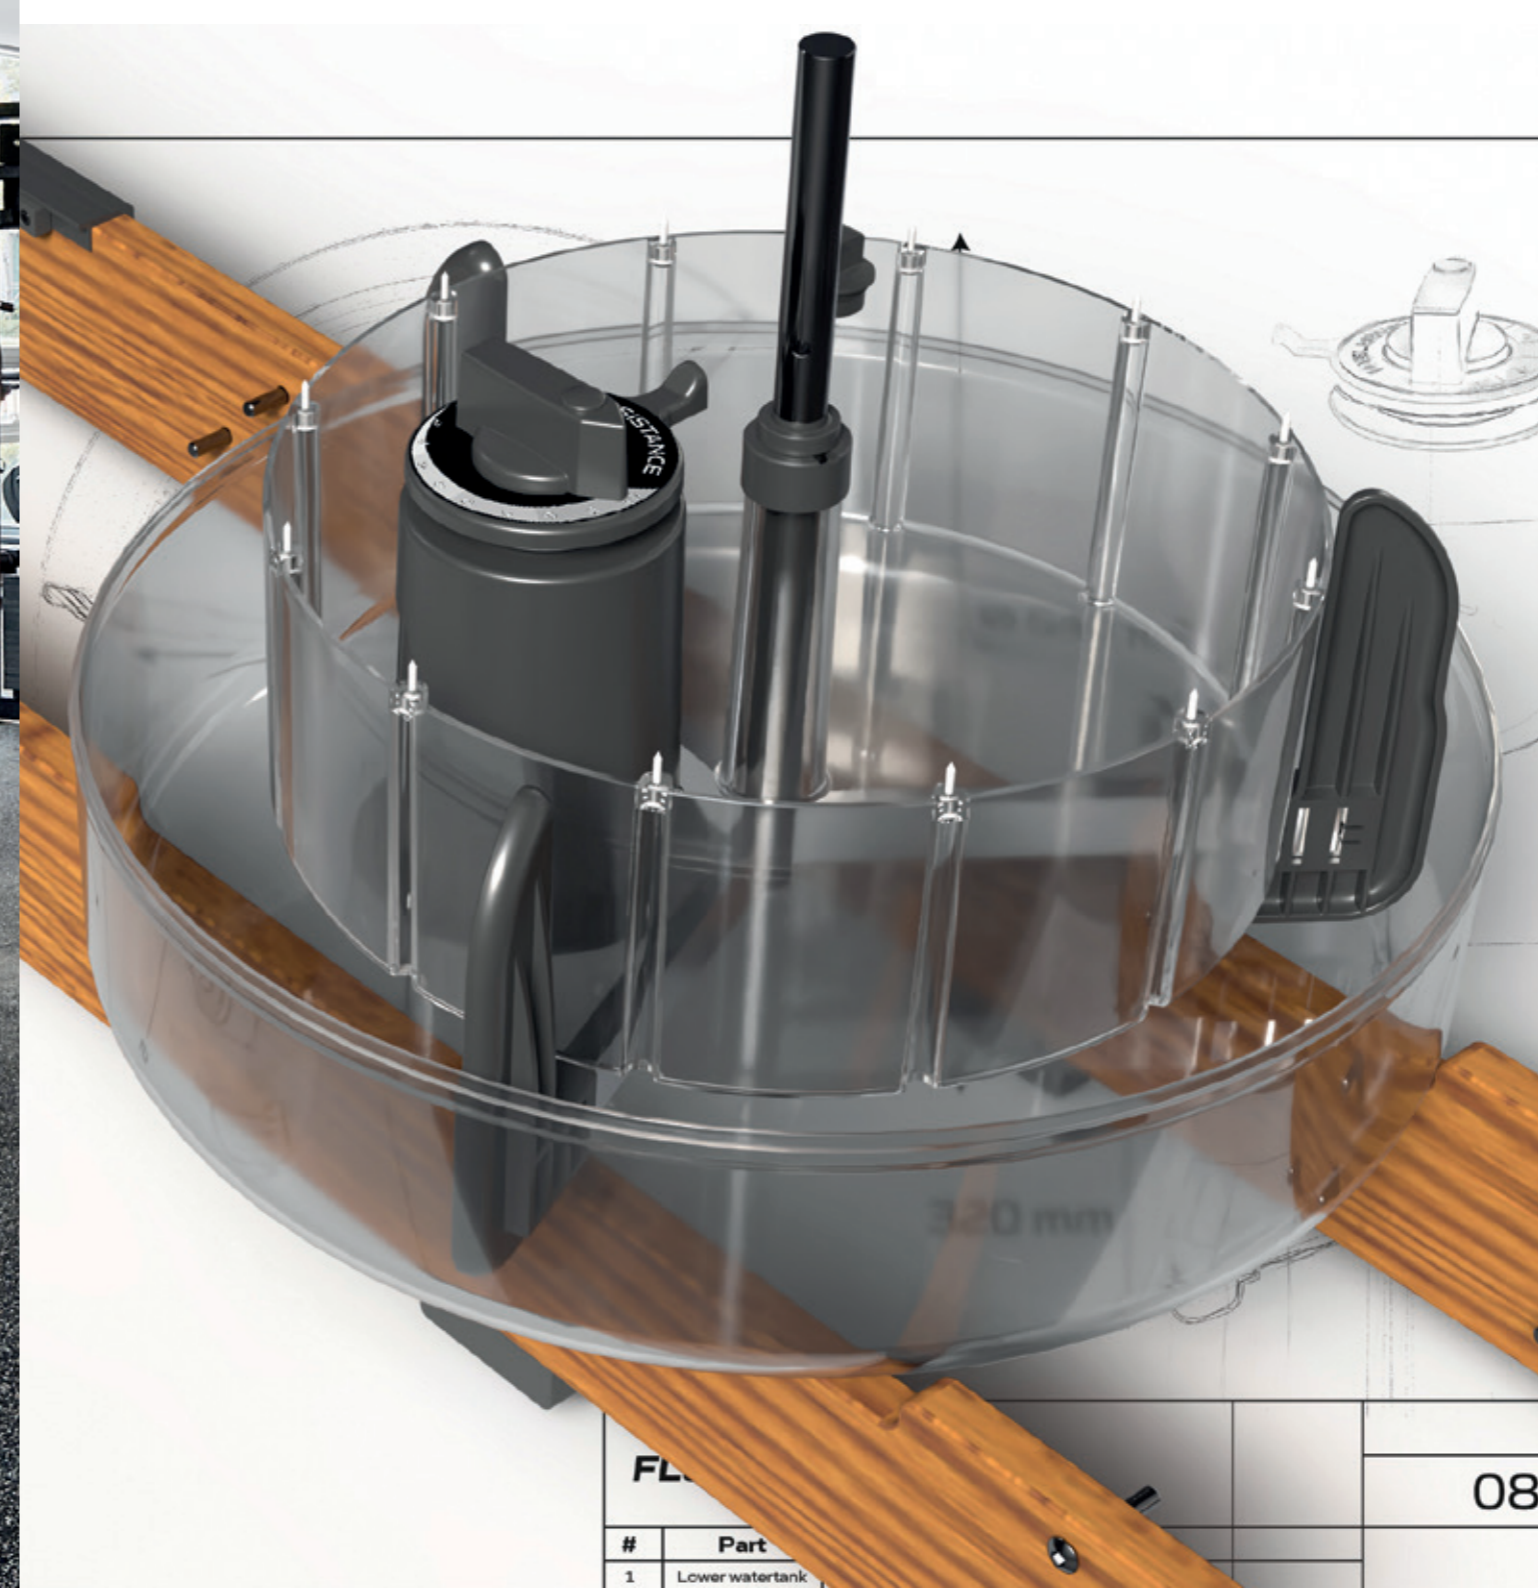

As you conquer each stroke, the feeling of accomplishment and fulfillment is unmatched. It's more than just exercise; it's a journey of fitness and wellbeing that seamlessly integrates with your lifestyle, adding a touch of craftsmanship and perfection to every aspect.

## PREMIUM QUALITY MEDICAL & FITNESS MACHINES

### INDISPENSABLE ADDITIONS TO ANY PROFESSIONAL TRAINING SPACE

The commercial Fluid Rowers are robust and indispensable additions to any professional training space such as [company] gyms, training studios and physiotherapy practices.

## PATENTED TWIN TANK TECHNOLOGY

### ROWING AS IF YOU WERE ON THE WATER

Rowing with a Fluid Rower sounds, feels and looks like you are on the water thanks to the high-quality water tank with patented Twin Tank technology. This unique system easily lets you adjust the resistance of the water at any time using the dial.

The Fluid Rower's water tank consists of two separate tanks: an inner tank and an outer tank. The inner tank is the 'passive tank' or storage tank, while the outer tank is the 'active tank' or resistance tank. If you select a higher resistance with the dial while rowing, the water is moved from the passive tank to the active tank.

As a result, you experience more resistance after a few rowing strokes. If you choose a lower resistance, the water is siphoned from the active tank back to the passive tank so you experience less resistance after a few strokes.

You experience fast and smooth resistance adjustment while you exercise, and never have to determine the water amount in the tank in advance.

## THE INSTANT CATCH

### CONSTANT RESISTANCE FROM START TO FINISH

**Years of experience and expertise have allowed us to develop each Fluid Rower to perfection. This is reflected, for example, in our unique resistance system.**

With most other rowing trainers with water resistance, people experience uneven resistance. This is because there is hardly any resistance at the start of each rowing stroke, a spike occurs right in the middle and the resistance disappears again at the end.

Fluid Rowers have an 'instant catch' thanks to a modification in the blade of the water tank. This means that resistance is felt continuously with every rowing stroke, from start to finish.

## FLUID RESISTANCE

### TWIN TANKS FOR COMMERCIAL USE

As far as we are concerned, rowing without adjustable resistance is like driving a car without gears. That is why each Fluid Rower is equipped with the patented Twin Tank with a dial that allows you to easily adjust the resistance. This makes the rower suitable for all training levels. Whether you're going for a light cardio workout or a high-intensity workout, it can all be done on the same rowing machine.

### XL TANK

#### XL / PRO XL MODELS

The XL Twin Tank has 10 resistance levels, a larger water capacity than the regular Twin Tank (found on the Plus models for home use), offering a staggering 65% more resistance. It also connects the water resistance dial to the Bluetooth Monitor via a sensor.

### VERTICAL XL TANK

#### VORTEX, EVOLUTION AND EXERCISE MODELS

Vertically placed Twin Tanks effectively move the water via a nine-blade stainless steel impeller, adding extra resistance. Additionally, the unique design causes the water to naturally flow downward, further enhancing the resistance due to gravity.

### LIFETIME WARRANTY

The patented Fluid Resistance Twin Tank has been perfected and refined down to the last detail: if the water limit is not exceeded, the tank never leaks. Not even if you place it upright. Therefore we offer a lifetime warranty on the water tank.

## ERGONOMIC NON-SLIP SEAT

### ULTIMATE COMFORT, STABILITY AND BALANCE WHILE ROWING

After years of research and development, we have found the perfect balance between hard and soft. Thanks to the well-thought-out, ergonomic shape and non-slip texture, you sit firmly yet comfortably in the seat. The seat is raised for easy access,

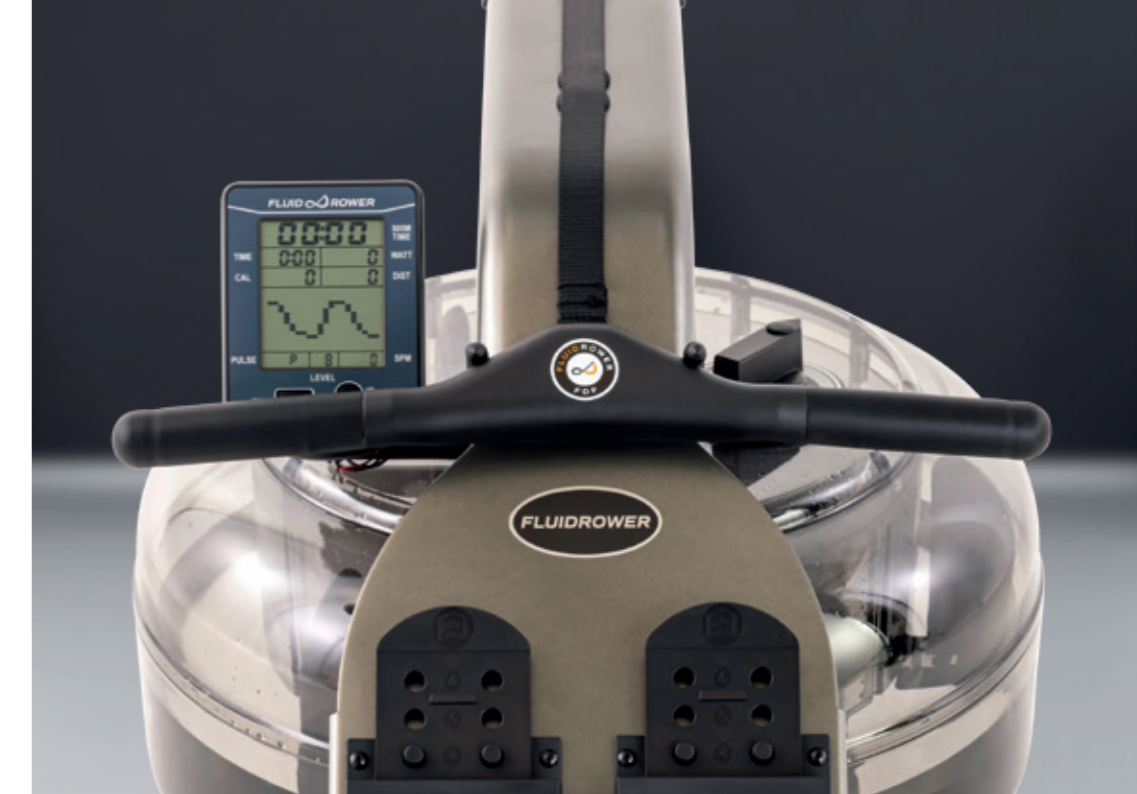

## PREMIUM ERGONOMIC HANDLE

### GOOD GRIP AND CORRECT POSTURE

Thanks to its slightly curved and extra-wide shape, it provides the best grip during every rowing stroke. Your body automatically assumes the best posture so you can apply the most force. The handle is connected to a nylon belt: strong, quiet and stable.

The strength of the bungee, the elastic band that pulls the belt back, has been optimised so that it doesn't add resistance but still smoothly pulls the belt back into the trainer as soon as you move forward. This is done in one smooth movement, without the bungee giving a pulling sensation or the belt 'stuttering' during this movement.

## INDIVIDUALLY ADJUSTABLE FOOTPLATES AND STRAPS

### EACH FOOT FIRMLY IN PLACE

Fluid's footplates are height-adjustable and feature two sturdy, separate foot straps that allow you to individually secure each foot. Your feet are close together, just like in a real rowing boat. Both footplates also feature a specially designed 'bucket' at the bottom.

Thanks to its design, this heel support fits perfectly around the heel of your shoe and moves with you during every rowing movement. As a result, your foot will never slip off while rowing.

THE FLUID BLUETOOTH MONITOR GIVES INSTANT INSIGHT INTO ALL TRAINING PARAMETERS.

The Fluid Rower Bluetooth monitor displays the following metrics and features:

- ELAPSED TIME:** TIME 2:13
- CALORIES BURNED PER HOUR:** CAL 817
- POWER GRAPHS (2 OPTIONS):** WATT 150, DIST 164
- HEART RATE:** PULSE P 4 57
- RESISTANCE LEVEL (AUTO DETECTED):** LEVEL
- 500M TIME:** 500M TIME
- WATT:** UNIT OF POWER PER STROKE
- DIST:** DISTANCE UPDATED EVERY SECOND
- SPM:** STROKES PER MINUTE
- CHEST BELT COMPATIBLE:** CHEST BELT COMPATIBLE

COMPATIBLE WITH

## ONLY THE FINEST MATERIALS

Using only the finest materials, elegance is combined with strength and durability, adding a touch of craftsmanship to any space.

### AMERICAN ASH WOOD

Ash wood is a strong, durable and affordable type of wood which has been sanded and varnished twice for extra protection. Each threaded hole in the wooden frame is fitted with a metal bushing. This prevents the wood from splitting or the screw from overturning during assembly and the rowing trainer from losing its sturdiness over time.

### STEEL

Stainless, sturdy and robust, steel frames last for years, even with heavy use. Steel rowers are generally cheaper in price compared to frames made of wood, but are just as durable and strong, with a very realistic rowing experience.

### ALUMINIUM

The lighter, resilient properties of aluminium are perfect for intensive interval training, short sprints and even endurance training.

## XL / PRO XL MODELS

✓ XL TWIN TANK: +65% RESISTANCE

✓ 10 RESISTANCE LEVELS

✓ FLUID BLUETOOTH MONITOR

### APOLLO XL

MADE OF ASH WOOD AND STEEL  
LIGHT BEECH COLOR  
NORMAL SIZE FRAMES

### VIKING 3 XL

RAISED LEGS & SEAT FOR EASY ACCESS  
EXTRA THICK & STURDY FRAMES

## VORTEX MODELS

✔ VERTICAL XL TWIN TANK: +65% RESISTANCE

✔ ROUNDED STEEL FRAMES

✔ METALLIC, HIGH-GLOSS FINISH

### VORTEX VX-2

THE VORTEX VX-2 HAS A COMPARATIVELY SHORT FRAME LENGTH WITH A METALLIC, HIGH-GLOSS FINISH, A RAISED SEAT AND LEGS FOR EASY ACCESS AND IT CAN BE STORED UPRIGHT.

### VORTEX VX-3

THE VORTEX VX-3 HAS A COMPARATIVELY SHORT FRAME LENGTH WITH A METALLIC, HIGH-GLOSS FINISH, A RAISED SEAT AND LEGS FOR EASY ACCESS AND AN EASY TO REACH RESISTANCE DIAL.

## EVOLUTION MODELS

✔ VERTICAL XL TWIN TANK: +65% RESISTANCE

✔ ANGULAR STEEL FRAMES

✔ REGULAR FINISH

### EVOLUTION E350

THE EVOLUTION E350 HAS A COMPARATIVELY SHORT FRAME LENGTH, A RAISED SEAT AND LEGS FOR EASY ACCESS AND IT CAN BE STORED UPRIGHT.

### EVOLUTION E550

THE EVOLUTION E550 HAS A COMPARATIVELY SHORT FRAME LENGTH, A RAISED SEAT AND LEGS FOR EASY ACCESS AND AN EASY TO REACH RESISTANCE HANDLE.

## EXERCISE MODELS

✓ VERTICAL XL TWIN TANK: +65% RESISTANCE

✓ UPPER/LOWER BODY ERGOMETERS

✓ MEDICAL & FITNESS MACHINES

### EXERCISE E750

- Upper arm cycle & lower body recumbent
- Cycle pedals and handgrips in one
- Counter balanced arm for easy 360° rotation
- Seat rotates 90° for easy access
- Handles for additional stability

### EXERCISE E850

- Standing & seated upper body ergometer
- Ergonomic handgrips
- Removable seat for wheelchair access
- Fully adjustable seat position
- Foot rest for additional stability

### EXERCISE E950

- Standing & seated upper body ergometer
- Adjustable handgrips in 7 positions
- Removable seat for wheelchair access
- Fully adjustable seat position
- Steel frame and ramp
